IN4086 Data Visualization
Final Project - Individual Evaluation

February 11, 2015

Kevin and I pair programmed the majority of the time during the project, thinking together about the preparation and visualization of the data itself. Later on, we split up two types of features, which are the tooltips and the timeline/brush. Kevin handled the tooltips when hovering over the ellipses and text, while I was responsible for the timeline. At the end, we coupled the tooltips to the timeline, along with all the hovering functionalities.

While programming, we always tried to adhere to the principles of data visualization which were taught to us during the lectures. This resulted in healthy design discussions, keeping us on our toes and resulting in a successful application.
